Key tape products related to semiconductors

- **Surface protective tape for thin & high-bump wafers**
  - This tape is specially designed to prevent thin wafers from bowing after back grinding.
  - It protects the surface of wafers from contamination by attaching to bumps formed on the circuit surface.
  - It prevents wafer damage by dispersing the stress placed upon wafers during back grinding.

- **Backside coating tape for Flip Chip**
  - This tape protects and reinforces the die backside in applications such as Flip Chip, in which some bumps (electrodes) is formed on the circuit surface and mounted onto a substrate.
  - It blocks light to minimize effects on the circuit surface.
  - Unlike a coating of liquid mold material, this product is available as a tape, ensuring outstanding uniformity in thickness, and allowing the simplification of conventional processes.
  - We have broad lineups of the tapes including Infrared Transmission Type and Thermal Conductive Type.
