Pressure-sensitive laminating films  **G-044EN25**

**Features**
- Surface protection laminating films for digital print
- It protects the image surface and enhances appearance and durability by laminating in printing materials.
- As polyester films are used for face stock, it provides high transparency.
- Ideal for window decorations, indoor application only

**Applications**
For indoor applications

**Standard sizes**
- 1,090mm × 50m rolls
- 1,250mm × 30m rolls
- 1,550mm × 30m rolls

**Product configuration**

**LINTEC method**

- **Adhesive strength test method**
  - Test instrument: load-cell tensile tester, release angle: 180°
  - Test conditions: 23°C 50%RH, release speed: 300 mm/min
  - One round trip with a rubber roller of 2kg adhesion pressure
  - Test panel: Stainless panel (SUS304 #360 polishing finish) Float glass

- **Holding strength test method**
  - Angle: 0°, test conditions: 40°C, adhesion area: 25 mm×25 mm
  - Five round trips with a rubber roller of 2kg adhesion pressure, still load: 9.8N
  - Test panel: Stainless panel (SUS304 #360 polishing finish)

- □ B: Base material failure
- □ Cf: Conhesion failure
- □ At: Adhesive transfer
- □ Zip: zipping
- ✓ NC: No creep

* Durability (usable period) may decline depending on the combined printing materials.

Precautions

- Numerical values in this data sheet are based on the results of our tests, and are not guaranteed.
  - Please verify performance in advance according to your application.
- Use the product within one year of purchase. Use the product as early as possible after opening.
- It does not provide removable performance as it is a permanent adhesive.
- Make sure of the adhesion of this pressure-sensitive laminating film and ink by conducting a test in advance.
  - For ink, please consult with printer manufacturers or ink manufacturers.
- To use for joints and the same surface, use the same lot.
- Do not use outdoors as the laminating films are exclusively for adhering indoors.
- Please consult with us if you wish to use the product for special applications.

Storage methods

- Avoid high temperature, low temperature and humidity for storage. Be sure to put this product in a bag, and hang it in the air.
  - Make sure that it is not exposed to direct sunlight.
- Prevent it from being exposed to fluorescent light at close range.
- Recommended ambient temperature: 10°C-30°C, humidity: 70%RH or less
  - The adhesive strength and holding strength become lower at low temperature or high temperature, and it is detached easily.
- Avoid contact with water, chemicals, and shock.
Precautions for output and processing

- Applying tension (brakes) excessively during the laminating process may cause curls.
- If compression bonding is insufficient during the laminating process, some air will remain between the printing materials and laminating films and become white. This may cause squeegee marks during work and bulging after work.
- Do not touch the output surface of printing materials directly with your hand during the laminating process. Sebum, oil, dirt, and scratches may lower print quality.
- Do not carry out post-processes such as laminating after printing until the ink is dried completely.
- For the time needed to dry ink, please contact your printer manufacturer.
- For output products with focus placed on color tones, check the change after laminating in advance.

Precautions for install

- Install ambient temperature: 10°C-40°C
- Install at high temperature may raise the initial adhesive strength and soften products.
- Operating temperature: -30°C-80°C

About maintenance after install

- Wipe with wet soft cloth for normal cleaning. If products get very dirty, use a neutral detergent (a concentration of 1 to 2%) depending on the degree of dirt. When a neutral detergent is used, wipe completely with a wet cloth so that the detergent will not remain.
- Do not use ammonic, chloric, or organic detergents.
- Do not wipe with a dry cloth.
- Do not use materials that may scratch the film surface, such as cleansers, hard cloth, and paper.
- If there is a joint on the film surface, wipe in the direction of the joint.
- Do not hit with hard articles or sharp objects.
- Keep away from cigarettes and other heat sources.
- Do not post a poster with cellophane tape, or articles that use adhesives such as badges and cutting sheets.
